

A renewed self-confidence with Dental Implants

Stephanie's smile says it all

In safe hands

Do you know a friend or relative who has lost their natural teeth and is afraid of the prospect of wearing dentures? Are they looking for a lasting solution using dental implants?

Stephanie, only 40 (something) simply wanted to find a dental clinic who would understand her absolute aversion to wearing dentures. Over the past few years Stephanie had suffered the loss of many natural teeth, failing bridgework and deterioration of her remaining teeth. Stephanie had attended three dental practices for consultations and felt the future looked hopeless. The treatment options offered were not only expensive, but they also involved her having all her remaining teeth removed and necessitated uncomfortable bone grafting surgical procedures. During the lengthy healing process Stephanie was offered no alternative to wearing dentures which really concerned her.

Finally Stephanie booked a consultation appointment at Hospital Lane Dental Clinic and her case was assessed by dental surgeons Don McMillan and Tony Auger. A number of options were discussed with Stephanie and it was concluded that she would benefit from a "Teeth Now" approach. This technique allows removal of failing teeth and placement of implants as a single procedure and allows the patient to have a fixed temporary bridge fitted the same day without the need for uncomfortable bone grafting procedures or a temporary denture. This treatment addressed all of Stephanie's needs and was less than 2/3rds of the cost of other treatments offered at other practices. Tony Auger explained that with the most up to date techniques using Nobel Biocare Implant Systems patients are now really benefiting from streamlined treatments involving less invasive surgery, immediate

function and improved appearance. These treatments are also less expensive because they avoid bone grafting procedures and the need for temporary dentures. Every week we are helping new patients looking for solutions to their dental problems and this is one of the reasons we have just relocated to a new purpose built clinic at Blue Bell Hill.

On completion of her treatment Stephanie was delighted; she had attended fewer visits to the surgery, the implant placement procedures were carried out gently and comfortably and she was back to her day to day life immediately with a renewed confidence because of her fixed temporary bridge. Stephanie's smile says it all.

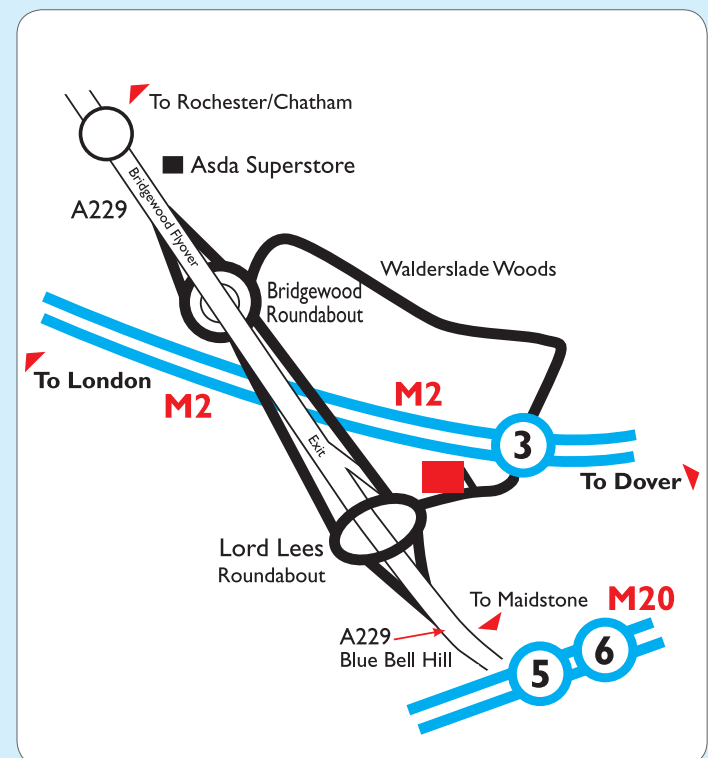

New Dental Clinic Open

Hospital Lane Dental Clinic has relocated to Blue Bell Hill by junction 3 of the M2. The new clinic has been designed to offer exceptional facilities and comfort for patients offering state-of-the-art dental services. The spacious purpose built clinic has invested in the latest equipment and technology available to provide patients with optimum treatments and the highest levels of care and value for money.

The new Hospital Lane Dental Clinic is easily accessible by road and has free car parking for patients. The clinic places emphasis on the training and skills of all the professionals offering a comprehensive range of all of the dental procedures currently available.

As well as a dedicated surgery for the placement of dental implants a full range of cosmetic treatments including veneers, dental crowns and whitening treatments are available. The clinic provides specialist periodontal and orthodontic treatments with referral facilities for endodontics and sedation.

The dental team of dentists, hygienists, nurses and receptionists has been relocated to the new clinic to ensure continuity of treatment and patient care of existing patients. The new location of the expanded clinic gives greater access for new patients across the county.
